Description

As a registered user of Booking.com, I want to be able to sign in to my account seamlessly, enabling me to access my personalized features.

The sign-in process offers flexibility through a variety of authentication methods:

1. *Manual entry of email address and password*
2. *Integration with Facebook, Google, and Apple accounts*
3. *Sign-in via email verification link*

Method 1 - Manual entry of email address and password

The workflow for this method will consist of the following steps:

- Clicking the "Sign in" button on the main page of the website.
- Entering a valid email address into the designated field and selecting "Continue with email."
- Inputting the associated password into the "Password" field and selecting "Sign in."
- Upon successful authentication, the user is redirected to the homepage of the website.

Method 2 - Integration with Facebook, Google, and Apple accounts

The workflow for this method will consist of the following steps:

- Clicking the "Sign in" button on the website's main page.
- Selecting the Google Logo below to initiate the Google sign-in process.
- A window pop-up will appear displaying existing Google accounts; the user selects an account.
- Upon selection, the user is redirected to a page prompting them to link their Google and Booking accounts. They can choose to link accounts by entering the associated Booking password into the "[Booking.com](#) password" field and clicking the "Link accounts" button. Upon providing valid password and submitting, the user is signed-in and redirected to the main page of the website.
- Alternatively, they can opt for the password-less method by selecting "Use password-less method." In this case, the user receives a verification email containing a verification link:

Verify and sign in

Hi,
Verify yourself below to sign in to your [Booking.com](#) account for [\[PROVIDED EMAIL ADDRESS\]](#)
The link can only be used once and will expire after 10 minutes if you don't use it.

Verify me

How does this work?

This secure, one-time URL lets you confirm your identity without a password. If you already have a password, this won't replace it, so you can still sign in with it later.

If you didn't request this verification link, you can safely ignore this email.

[Privacy and Cookies](#)

- Upon clicking the "Verify me" or "Verify yourself here" button in the email, the user is signed in and redirected to the website's homepage.

Method 3 - Sign-in via email verification link

The workflow for this method will consist of the following steps:

- Clicking the "Sign in" button on the website's main page.
- Entering a valid email address into the "Email address" field and selecting "Continue with email."
- Leaving the Password field blank and clicking on the "Sign in with a verification link" button.
- The user should now encounter the following: *Check your inbox. We've just emailed a verification link to [PROVIDED EMAIL ADDRESS]. Once it arrives, it will be valid for 10 minutes.*
- The email containing the verification link should appear like this:

Verify and sign in

Hi,
Verify yourself below to sign in to your [Booking.com](#) account for [\[PROVIDED EMAIL ADDRESS\]](#)
The link can only be used once and will expire after 10 minutes if you don't use it.
[Verify me](#)
